General:

Vahle Festoon systems support electric cables or hoses for mobile machinery.

The cable carriers contained in this catalog comply with VDE regulations and international safety requirements. Flat and round cables could be used.

Due to the good bending characteristics and the small allowed bending radii the flat cables are preferred.

Track profiles can be standard I-beams of the INP or IPE series. The suitable beam sizes could be found in the tables at the particular cable carriers.

Application

Cable carrier ride on an I-beam parallel to the traversing track of the equipment. Where there is sufficient space for the storage distance, the cable carriers can run on the hoist track.

While at the cable carriers of the series 20 and 30 the lead is handled over a lead carrier, where at the machinery installed towing arm engage at the lead carrier, at all other cable carrier series is the lead handled over a towing arm which is fixed with the machinery.

The track clamp is the stationary fastening point of the cables and is bolted to the I-beam at fixed position. The cable ends extending from the track clamp are terminated at a junction box. The track clamp, together with the bumper, facing towards the last carrier, serves as a limit stop for the carriers.

Tow ropes are optional depending on the cable arrangement, loop depth, travel speed and acceleration. The strain relief ropes are slightly shorter than the electric cables in each loop.

Layout

Layout considerations for cable carriers are cable or hose dimensions and the load-carrying capacity of the cable carriers.

When selecting a Festoon system please refer to pages 35 – 39 of this catalog or please send us the completed questionnaire on page 3.

Catalog No. 8a: Cable Carriers on  -Tracks

CABLE CARRIER W 55 • HEAVY DUTY

(Standard- or European profile)

Engineering data

Type	W 55
Carrying capacity	70 kg
Travel speed	max. 120 m/min when using appropriate cable tension relief
Wheel sets	for standard tracks INP 80 to 200 ⁽¹⁾ for flat flange beams IPE 80 to 200 ⁽¹⁾
Wheels	flanged steel wheels Ø 45/60 mm, on stainless steel, bushed bearing, tread hardened and galvanized Support rollers (Dia.) 45 mm made of polyamid, /w antirust plain bearing
Material	Carrier body: steel galvanized Support saddle: aluminium
Operating ambients	-30° C thru +100° C

(L) = with one bumper

Beam	Z
INP 80	71
INP 100	79
INP 120	87
INP 140	95
INP 160	103
INP 180	111
INP 200	119
IPE 80	76
IPE 100	85
IPE 120	94
IPE 140	103
IPE 160	112
IPE 180	121
IPE 200	130

Extension rubber profile

Assembly clamping of round clamping:
The extension profil can be ordered as piece goods
(see Page 8. (Order-No.: 348 845))

Please specify with your order:

CABLE CARRIER W 65 • HEAVY DUTY

(Standard- or European profile)

Engineering data

Type	W 65	
Carrying capacity	wheels 65 mm: max. 200 kg 80 mm: max. 300 kg	see wheel sets page 25
Travel speed	max. 160 m/min	
Wheel sets	for standard track (INP) and flat flange beam (IPE) available with or without lateral & vertical guide rollers	
Wheels	flanged steel wheels Ø 65/80 mm or cylindrical steel wheels 80 mm OD with sealed precision ball bearings hardened and galvanized or with polyurethane-covering	
Material	Carrier body: steel galvanized Support saddle: aluminium	
Operating ambients	-30° C thru +100° C	

* Other width on request

LWA- 10/100	16,500	346 206	346 316	

IPE 140 thru IPE 200

Wheel set settings for beams with alternative flange dimensions on request.

The type description and the part number contain two single wheel sets for one carrier.

⁽¹⁾ The type description of the wheel sets with vulkollan-wheels have the addition -V (Example: LWA- 2/100-V).

CABLE LOOP CLAMPS

Material: Clamping parts of aluminium
Spacers and end caps of plastic
Hardware of galvanized steel

Type	GIK 2 – AI
Order- No.	346 961
Material	2 clamping bolts

Type	GIK 3 – AI
Order- No.	346 971
Material	3 clamping bolts

Type	GIK 4 – AI
Order- No.	346 972
Material	4 clamping bolts

The cable loop clamps are supplied with a clamping height HK – 5 mm.
Larger clamping heights HK reduce the space HG accordingly.
For correct adjustment of space HG remove spacers.
Space reduction = cable thickness – 5 mm.
Available reductions of space HG in mm:

2,5 / 5 / 10 / 12,5 / 15 / 20 / 22,5 / 25

General dimensions of cable loop clamps on request.

Please specify with your order:

Cable Loop Clamp:	: Type	Order- No.	
Dimensions of cable packs: HK x BK 1 / HK x BK 2 :		/	mm
HL 1 x BL 1 / HL 2 x BL 2 :		/	mm

TENSION RELIEF

1. Steel Ropes (Tow Cables)

Recommended for applications with

- Over 30 m Travel Distance (Working Travel)
or in general for mechanical sensitive cables and/or in very dusty environments
- Travel Speeds up to 80 m/min
- Accelerations up to 0.3 m/s²

For higher speeds or accelerations please consult the factory.

Type	Z 4	Z 4-PVC	Z 5	Z 5-PVC	Z 6	Z 6-PVC

V =	28 mm		42 mm		42 mm	
Material and finish	steel galvanized	steel galvanized PVC-shrouded	steel galvanized	steel galvanized PVC-shrouded	steel galvanized	steel galvanized PVC-shrouded
Admissible tension force (6 times safety factor)	3500 N		3500 N		6100 N	
Type of shackle lock	safety nut		hex. nut and split-pin			
for Cable carrier	W 45 / W 55		W 65 thru W 95			

Design: Round cord rope made of steel wires with fibre layers, galvanized or additional PVC-shrouding, in prefabricated length, incl. rope-clips, thimbles and shackles.

Weight: Shackles, thimbles, bush = 0.5 kgs on both sides

Projecting bumper:

Cable Carrier Type	Y in mm
W 45	0
W 55 (1 bumper)	3
W 55 (2 bumper)	15
W 65 and W 75	4
W 85 and W 95	6

How to determine the Tow rope Length:

$$X = \frac{S(f - 0,1) + Z}{n} + 2 Y$$

X = Length of tow rope mm
S = working travel mm
f = Cable safety factor (1,15)
Z = open space mm (min. one carrier)
n = number of cable loops
Y = projecting bumper (mm; see table)

Cable carrier at a container crane

I-Profil

1. Install I-beam track parallel with runway of equipment; the side clearance to be sufficient to avoid interference with swinging cables.
2. The support structure of the I-beam must be adequately designed for the anticipated loads. Smooth out welded joints to ensure smooth traversing of cable carriers.

The support of the I-beam has to take place according to the occurring load. The joints have to be carried out aligned. At the tread the welding seams have to be smoothed. den Laufflächen müssen die Schweißnähte geglättet werden.

Cable Carriers

Carriers type W 20 thru W 30

Installation procedure:

1. Lead carrier: The wheel set width (only W 30) have to be adjusted according to the I-beam.
2. Cable carrier: The wheel set width (only W 30) have to be adjusted according to the I-beam.
3. End clamp: Fixed to the lower flange of the I-beam.

4. Bumper (only W 30): Fixed at the bar of the I-beam.

5. Connecting of the lead carrier to the machinery: The towing arm – (approx. 25 thru 320 mm (dia.) by others) have to be installed that it fit into the center of the rectangular pipe of the lead carrier and the distance between end clamp at the runway and the lead carrier is not smaller than the storage distance.

Carriers type W 35, W 40

Installation procedure:

1. Cable carrier: The wheel set width have to be adjusted according to the I-beam.
2. End clamp: Fixed to the lower flange of the I-beam.
3. Bumper: Fixed at the bar of the I-Profile.

4. The lead carrier of the series W 35 and W 40 are not designed as carriers, but as free under the I-beam travelling units and are connected fix with the machinery over a boom (e.g. U-profile). The stopper have to be adjusted according to the I-beam. The arrangement of the boom can be seen on the dimensional drawing of the according cable carrier type.

Carriers type W 45 thru W 95

Installation procedure:

1. Cable carrier: Factory adjusted according to the I-beam.
2. End clamp: Fixed to the lower flange of the I-beam.
3. Lead carrier: The lead carriers of the series W 55 thru W 95, are not designed as carriers, but as free under the I-beam travelling units and are connected fix with the machinery over a boom (e.g. U-profile). The arrangement of the boom can be seen on the dimensional drawing of the according cable carrier type. The cable carriers of the series W 55 have in addition a bumper extension to cover bigger travel inaccuracy. It must be installed during installation at the first cable carrier behind the lead carrier.

ling units and are connected fix with the machinery over a boom (e.g. U-profile). The arrangement of the boom can be seen on the dimensional drawing of the according cable carrier type. The cable carriers of the series W 55 have in addition a bumper extension to cover bigger travel inaccuracy. It must be installed during installation at the first cable carrier behind the lead carrier.

Cables

The cables will be installed tight according to the cable arrangement drawing using terminal blocks on the support saddle. They are locked with counternuts.

During apply of the cables please note that the cable length (L) between end clamp and lead carrier will be installed with constant loop depth onto the carrier.

In the bottom peak of the loop is a distance of approx. 5-10 mm between the single cable layer necessary.

Cable loop clamps

Cable loop clamps serve in the loop to guide the cable. The number of clamps per loop is depending on loop depth, cable packet and assembly situation of the system. As a single clamp it will be installed in the lower peak of the loop. With more than one cable loop clamp they will be arranged staggered in the lower third of the loop. The installation could be done, depending on the cable packet, pendant or standing. (Picture = pendant)

The cables of the packet have to be clamped with approx. 2 mm air gap to the clamping screws.

To prevent damaging of the cables during use, the thread ends of the clamping screws don't have to protrude over the metal profile. (see Picture)

The cables which are guided through the clamp have to swing freely.

The cable loop clamps will be delivered with a clamping height of $HK = 5$ mm. With bigger clamping heights the clamping distance is reduced accordingly. To adjust the clamps correctly the spacers have to be removed. Distance reducing = Cable thickness – 5 mm.

Available reducing of the distance HG in mm: 2,5 / 5 / 10 / 12,5 / 15 / 20 / 22,5 / 25 (please refer to page 27).

Steel tow ropes

The lead of the cable carriers is supported by strain relief tow ropes. These have to be untwisted and fixed with a shackle to the cable carrier. The protection of the shackle is done with nut and split-pin or with a locknut.

Rubber tow ropes

Please refer to the installation instructions.

Pre-assembly

Cable carrier systems could be delivered pre-assembled on a installation support beam.

Please note: When the installation of the cable carrier system is made on a support beam, please note that heavy connecting length are intercepted and not load the particular cable carrier.

Test run

Check of the running characteristics of the cable carrier and the correct travel over the beam joints.

Maintenance

All rollers have a lifetime lubrication, a additional grease is not necessary. Approx. All three months the following controls have to be done:

1. Check – Wear of the rollers.
2. Check of all screws and nuts.
3. Check of the cable clamping at the cable carrier, lead carrier and the end clamp und counternuts of these screws.
4. Check of all cable loop clamps.
5. Check of all strain relief ropes and there fixings.
6. Check of all cables.

TYPICAL APPLICATION AND HOW TO ORDER

Analytical Life Expectation (L_r) of Wheel Bearings⁽¹⁾

Example for ordering

Application: Electrification for mobile stacker/reclaimer system

Cables:	2 Neoprene flat cables 4 x 35 mm ² 6 Neoprene flat cables 12 x 2,5 mm ² 3 Neoprene flat cables 8 x 1,5 mm ² , screened
Cable allowance for hookup (each end):	2 x 5 m
Working travel:	60 m
Loop depth:	3,0 m
Travel speed:	max. 30 m/min
I-Beam track:	INP 100

How to select the correct cable festoon system:

1. Draw a sketch of your cable package inside the window (clamping capacity) of your carrier and make a rough calculation of the cable weight per carrier.	
2. Specify cable carriers (see page 11)	W 55 F / 325 - 170 - B 175
3. Safety factor cable length (see page 35)	f = 1,15
4. Cable loops (diagram page 37)	n = 12
5. Storage distance (formula page 34)	SP = min. 4,250 m
6. Cable loop clamps required? (see page 27)	yes, 2 per cable loop
7. Tension relief required? (see page 28)	yes
Specify diameter of tow rope	Ø 6/8
Specify length of tow rope (formula page 34)	X = 5300 mm
8. Determine length of cable required (formula page 34)	L _{total} = 84 m

Material to order:	Type	Order- No.
11 Cable carriers for I-Beam track INP 100	W 55 F/325 - 170 - B 175	346 124

Layout of the system

1. Number of loops (see diagram or formula)

$n = \frac{f \times S}{2 h - f \times l + 1,254 D} = \frac{x}{2 x - x + 1,254 x} =$		determined
---	--	------------

2. Loop depth (see diagram or formula)

$h = \frac{f}{2} \left(\frac{S}{n} + l \right) - 0,627 \times D = \frac{\quad}{2} \left(\frac{\quad}{\quad} + \quad \right) - 0,627 \times \quad = \quad \text{m}$
--

3. Storage distance (center track clamp to center lead clamp)

$SP = l(n - 1) + l_e + l_m + Z = (\quad) + \quad + \quad + \quad = \quad \text{m}$
--

4. Cable length

Cable length w/o hookup ends (Center end clamp thru center lead carrier) $L = (S + SP) \times f = (\quad + \quad) \times \quad = \quad \text{m}$
Hookup length – track clamp side $L_e = \quad \text{m}$
Hookup length – lead clamp side $L_m = \quad \text{m}$
Total cable length $L_{ges} = \quad \text{m}$

5. Cable weight per carrier

$G_{LW} = \frac{L}{n} \times G_L = \quad \times \quad = \quad \text{kg}$
--

6. Length of tow rope

$X = \frac{S(f - 0,1) + Z}{n} + 2 Y = \frac{(\quad - 0,1) + \quad}{\quad} + 2 \times \quad = \quad \text{m}$
--

⁽¹⁾ (Free space (Z) must be available with stored crane bumper (emergency stop).

HOW TO DETERMINE

Number and Depth of Loops, Storage Distance, Cable Length, Number of Carriers

Cable Safety Length Directions

Travel speed	cable loop depth	safety factor
up to 35 m/min	more than 0,3 m	f = 1,1 (1,15 with tow ropes)
up to 50 m/min	up to 0,8 m	f = 1,15
up to 50 m/min	more than 0,8 m	f = 1,1 (1,15 with tow ropes)
up to 80 m/min	up to 0,8 m	f = 1,2
up to 80 m/min	more than 0,8 m	f = 1,15

For higher speed (> 80 m/min) and/or acceleration (> 0,3 m/s²) factors please consult factory.

Number of loops

$$n = \frac{f \times S}{2 h - f \times l + 1,254 D}$$

Cable loop depth

$$h = \frac{f}{2} \left(\frac{S}{n} + l \right) - 0,627 \times D$$

Storage distance

$$SP = l (n - 1) + l_e + l_m + Z$$

Cable length

(c/c track clamp – lead clamp without hookup ends)

$$L = (S + SP) \times f$$

Number of carriers

(w/o lead carrier and track clamp)

$$= n - 1$$

- S = travel distance (m)
- h = cable loop depth (m)
- SP = storage distance (m)
- Z = open space⁽²⁾
(min. one carrier length)
- n = number of loops
- l = length of carrier (m)
- D = diameter of support saddle(m)
- f = cable length safety factor
- l_e = cable hookup length – track clamp side (m)
- l_m = cable hookup length – lead clamp side (m)
- H = system height (m)

⁽²⁾ Free space (Z) must be available with stored crane bumper (emergency stop).

The diagram considers a cable safety length factor of $f = 1.1$

CABLE LOOPS

The diagram considers a cable safety length factor of $f = 1.15$

The diagram considers a cable safety length factor of $f = 1.2$
